

## Instalasi WordPress

Instalasi WordPress ini dapat dicoba pada sistem operasi Linux atau FreeBSD. Bagaimana cara instalasi Apache, PHP dan MySQL dapat merujuk ke [sini](#).

### 1. Yang diperlukan

- PHP 4.1 atau versi yang lebih tinggi
- MySQL 3.23.23 atau versi yang lebih tinggi
- Apache (1.3 – 2.0) atau versi yang lebih tinggi

### 2. Download WordPress

Download paket WordPress di <http://www.wordpress.org>, versi yang di gunakan ialah WordPress versi 2.0.1.

```
[faiz@faiz ~]$ cd tmp/
[faiz@faiz tmp]$ wget http://wordpress.org/latest.tar.gz
--02:59:32-- http://wordpress.org/latest.tar.gz
=> `latest.tar.gz'
Resolving wordpress.org... 72.36.137.146
Connecting to wordpress.org[72.36.137.146]:80... connected.
HTTP request sent, awaiting response... 200 OK
Length: unspecified [application/octet-stream]

[    <=>          ] 504,946   40.69K/s

02:59:46 (38.14 KB/s) - `latest.tar.gz' saved [504,946]
```

### 3. Ekstrak paket WordPress sesuai DocumentRoot Apache.

Anda dapat menggunakan virtual host (misalnya wp.purwakarta.org ) atau juga membuat direktori baru pada DocumentRoot untuk WordPress (ini yang paling mudah karena tak perlu tambah nama baru di DNS dan edit Vhost.conf di apache). DocumentRoot nya /var/www/html (sesuaikan dengan conf apache anda) atau bisa juga di /usr/local/apache2/htdocs/.

- Untuk yang DocumentRoot = /var/www/html

```
[faiz@faiz tmp]$ su
```

```
Password:
```

```
[root@faiz tmp]# tar zxvf latest.tar.gz -C /var/www/html/
```

- Untuk yang DocumentRoot = /usr/local/apache2/htdocs

```
[faiz@faiz tmp]$ su
```

```
Password:
```

```
[root@faiz tmp]# tar zxvf latest.tar.gz -C /usr/local/apache2/htdocs/
```

#### 4. Edit file konfigurasi WordPress

```
[root@faiz tmp]# vi /var/www/html/wordpress/wp-config-sample.php
```

Rubah 4 variabel dibawah ini.

```
// ** MySQL settings ** //  
define('DB_NAME', 'wordpress');  
define('DB_USER', 'username');  
define('DB_PASSWORD', 'password');  
define('DB_HOST', 'localhost');
```

Menjadi :

```
define('DB_NAME', 'wordpress'); // nama database  
define('DB_USER', 'faiz'); // nama user pada MySQL  
define('DB_PASSWORD', 'p4ss'); // password user pada MySQL  
define('DB_HOST', 'localhost'); // gak usah di rubah.
```

Jika sudah selesai save dengan nama **wp-config.php**.

Bagaimana caranya menambahkan user dan database pada MySQL, anda dapat merujuk [ke links ini](#). Atau cara cepatnya seperti berikut :

```
[root@faiz tmp]# mysqladmin -p create wordpress
```

```
Enter password:
```

```
[root@faiz tmp]# mysql -p
```

Enter password:

Welcome to the MySQL monitor. Commands end with ; or \g.

Your MySQL connection id is 8 to server version: 4.1.11

Type 'help;' or '\h' for help. Type '\c' to clear the buffer.

```
mysql> use wordpress;                                Database changed
mysql> grant all privileges on `wordpress` to 'faiz'@'localhost' with grant option;
Query OK, 0 rows affected (0.09 sec)
```

```
mysql> flush privileges;
Query OK, 0 rows affected (0.07 sec)
```

```
mysql> quit
Bye
[root@faiz tmp]#
```

## 5. Instalasi WordPress

Jalankan Browser dan arahkan ke URL WordPress anda.

<http://www.faiz.net/wordpress/wp-admin/install.php>

Welcome to WordPress installation. We're now going to go through a few steps to get you up and running with the latest in personal publishing platforms. You may want to peruse the [ReadMe documentation](#) at your leisure.

**[First Step »](#)**

---

*[WordPress](#), personal publishing platform.*

### First Step

Before we begin we need a little bit of information. Don't worry, you can always change these later.

Weblog title:

Your e-mail:

*Double-check that email address before continuing.*

**Continue to Second Step »**

*[WordPress](#), personal publishing platform.*

### Second Step

Now we're going to create the database tables and fill them with some default data.

*Finished!*

Now you can [log in](#) with the **username** "admin" and **password** "6f5e5f".

**Note that password** carefully! It is a *random* password that was generated just for you. If you lose it, you will have to delete the tables from the database yourself, and re-install WordPress. So to review:

Username  
admin

Password  
6f5e5f

Login address  
[wp-login.php](#)

Were you expecting more steps? Sorry to disappoint. All done! :)

*[WordPress](#), personal publishing platform.*

The image shows the WordPress login interface. At the top is the WordPress logo and the word "WORDPRESS" in a serif font. Below this are two input fields: "Username:" with the text "admin" and "Password:" with masked characters "\*\*\*\*\*". There is a checkbox labeled "Remember me" and a "Login >>" button. At the bottom, there are two links: "<< Back to blog" and "Lost your password?"

The image shows the WordPress dashboard for a user named "faiz". The top navigation bar is dark blue and contains the site name "Faiz Blog's (View site >>)" and the user name "Howdy, faiz [Sign Out, My Account]". Below this is a secondary navigation bar with links for "Dashboard", "Write", "Manage", "Links", "Presentation", "Plugins", "Users", "Options", and "Import". The main content area is titled "Dashboard" and includes a "Welcome to WordPress" message with several links: "Write a post", "Update your profile or change your password", "Add a link to your blogroll", and "Change your site's look or theme". There is also a "Latest Activity" section with "Comments" (one comment: "Mr WordPress on Hello world! (Edit)"), "Posts" (one post: "Hello world!"), and "Blog Stats" (1 post, 1 comment, 1 category).

Documentation — Support Forums  
2.0.1 — 220.61 seconds

Jangan lupa untuk mengganti password admin dengan password yang anda inginkan, anda dapat mengubahnya di bagian 'Users'.
